

Oracle SQL Cheat Sheet

www.databasestar.com

SELECT Query

SELECT col1, col2 FROM table JOIN table2 ON table1.col = table2.col WHERE condition GROUP BY column_name HAVING condition ORDER BY col1 ASC|DESC;

SELECT Keywords

SELECT DISTINCT product_name DISTINCT: Removes duplicate results FROM product;

BETWEEN: Matches a SELECT product_name value between two FROM product other values (inclusive) WHERE price BETWEEN 50 AND 100;

> SELECT product_name FROM product WHERE category IN

('Electronics', 'Furniture');

LIKE: Performs SELECT product_name wildcard matches using FROM product _ or % WHERE product_name LIKE '%Desk%";

IN: Matches to any of

the values in a list

loins

SELECT t1.*, t2.* join_type t2 ON t1.col = t2.col;

Table 1 Table 2 Α В В

INNER JOIN: show all matching records in both tables.

LEFT IOIN: show all records from left table, and any matching records from right table.

RIGHT JOIN: show all records from right table, and any matching records from left table.

D A A С

D

FULL JOIN: show all records from both tables, whether there is a match or not.

CASE Statement

Simple Case

WHEN 'John' THEN 'Name John' WHEN 'Steve' THEN 'Name Steve' ELSE 'Unknown'

Searched Case

WHEN name='John' THEN 'Name John' WHEN name='Steve' THEN 'Name Steve' FLSE 'Unknown'

Common Table Expression

WITH gueryname AS (SELECT col1, col2 FROM firsttable) SELECT col1, col2.. FROM queryname...;

Modifying Data

INSERT INTO tablename Insert (col1, col2...) VALUES (val1, val2);

Insert from a INSERT INTO tablename (col1, col2...) SELECT col1, col2...

Insert Multiple INSERT ALL Rows

INTO tablename (col1, col2) VALUES (valA1, valB1) INTO tablename (col1, col2) VALUES (valA2, valB2) SELECT * FROM dual;

UPDATE tablename SET col1 = val1 WHERE condition;

Update with UPDATE t SET col1 = val1 a Join FROM tablename t INNER JOIN table x ON t.id = x.tid WHERE condition;

DELETE FROM tablename Delete WHERE condition;

Indexes

Create Index CREATE INDEX indexname ON tablename (cols);

DROP INDEX indexname; Drop Index

Set Operators

Aggregate Functions

- SUM: Finds a total of the numbers provided
- COUNT: Finds the number of records
- · AVG: Finds the average of the numbers provided
- MIN: Finds the lowest of the numbers provided
- · MAX: Finds the highest of the numbers provided

Common Functions

- · LENGTH(string): Returns the length of the provided string
- INSTR(string, substring, [start_position], [occurrence]): Returns the position of the substring within the specified string.
- TO_CHAR(input_value, [fmt_mask], [nls_param]): Converts a date or a number to a string
- TO_DATE(charvalue, [fmt_mask], [nls_date_lang]): Converts a string to a date value.
- TO_NUMBER(input_value, [fmt_mask], [nls_param]): Converts a string value to a number.
- ADD_MONTHS(input_date, num_months): Adds a number of months to a specified date.
- SYSDATE: Returns the current date, including time.
- CEIL(input_val): Returns the smallest integer greater than the provided number.
- $\label{floor} FLOOR \mbox{(input_val): Returns the largest integer less than the}$ provided number.
- ROUND(input val. round to): Rounds a number to a specified number of decimal places.
- TRUNC(input_value, dec_or_fmt): Truncates a number or date to a number of decimals or format. REPLACE(whole_string, string_to_replace, [replacement_string]):
- Replaces one string inside the whole string with another string. SUBSTR(string, start_position, [length]): Returns part of a value, based on a position and length.

Create Table

Create Table CREATE TABLE tablename (column_name data_type

Create Table with Constraints

CREATE TABLE tablename (column_name data_type NOT NULL, CONSTRAINT pkname PRIMARY KEY (col), CONSTRAINT fkname FOREIGN KEY (col) REFERENCES other_table(col_in_other_table), CONSTRAINT ucname UNIQUE (col), CONSTRAINT ckname CHECK (conditions)

Create Temporary CREATE GLOBAL TEMPORARY TABLE

tablename (

colname datatype) ON COMMIT DELETE ROWS;

Drop Table DROP TABLE tablename;

Alter Table

ALTER TABLE tablename Add Column ADD columnname datatype;

ALTER TABLE tablename Drop Column DROP COLUMN columnname:

Modify Column ALTER TABLE tablename MODIFY

columnname newdatatype;

ALTER TABLE tablename RENAME COLUMN Rename Column

currentname TO newname:

ALTER TABLE tablename ADD Add Constraint

CONSTRAINT constraintname constrainttype (columns);

ALTER TABLE tablename DROP Drop Constraint

constraint type constraintname:

Rename Table sp rename 'old_table_name'. 'new_table_name';

Window/Analytic Functions

function_name (arguments) OVER ([query_partition_clause] [ORDER BY order_by_clause [windowing_clause]])

Example using RANK, showing the student details and their rank according to the fees_paid, grouped by gender:

student_id, first_name, last_name, gender, fees_paid, PARTITION BY gender ORDER BY fees_paid) AS rank_val FROM student:

Subqueries

SELECT id, last_name, salary Single Row FROM employee WHERE salary = SELECT MAX(salary) FROM employee SELECT id, last_name, salary Multi Row FROM employee WHERE salary IN (SELECT salary FROM employee WHERE last_name LIKE 'C%'
