SELECT Query

SELECT col1, col2 FROM table JOIN table2 ON table1.col = table2.col WHERE condition GROUP BY column_name HAVING condition ORDER BY col1 ASC|DESC;

SELECT Keywords

DISTINCT: Removes SELECT DISTINCT product_name duplicate results FROM product;

BETWEEN: Matches a value between two other values (inclusive) SELECT product_name FROM product other values (inclusive) WHERE price BETWEEN 50 AND 100;

IN: Matches to any of the values in a list

SELECT product_name
FROM product
WHERE category IN
('Electronics', 'Furniture');

LIKE: Performs SELECT product_name wildcard matches using _ or % WHERE product_name LIKE '%Desk%";

Joins

SELECT t1.*, t2.*
FROM t1
join_type t2 ON t1.col = t2.col;

 Table 1
 Table 2

 A
 A

 B
 B

 C
 D

INNER JOIN: show all matching records in both tables.

B B

table, and any matching records from right table.

RIGHT JOIN: show all records from

from left table.

right table, and any matching records

LEFT JOIN: show all records from left

A A B B

FULL JOIN: show all records from both tables, whether there is a match or not.

A A B B C

CASE Statement

Simple Case CASE name

WHEN 'John' THEN 'Name John' WHEN 'Steve' THEN 'Name Steve' ELSE 'Unknown'

END

Searched Case CASE

WHEN name='John' THEN 'Name John' WHEN name='Steve' THEN 'Name Steve ELSE 'Unknown'

END

Common Table Expression

WITH queryname AS (
SELECT col1, col2
FROM firsttable)
SELECT col1, col2..
FROM queryname...;

Modifying Data

Insert Multiple INSERT INTO tablename (col1, Rows col2...)

VALUES

(valA1, valB1),
(valA2, valB2),
(valA3, valB3);

Update UPDATE tablename SET col1 = val1 WHERE condition;

Update with UPDATE t
a Join SET col1 = val1
FROM tablename t
INNER JOIN table x
ON t.id = x.tid
WHERE condition:

Delete DELETE FROM tablename WHERE condition;

Indexes

Create Index CREATE INDEX indexname ON tablename (cols);

Drop Index DROP INDEX indexname;

Set Operators

Aggregate Functions

- SUM: Finds a total of the numbers provided
- COUNT: Finds the number of records
- AVG: Finds the average of the numbers provided
- MIN: Finds the lowest of the numbers provided
- MAX: Finds the highest of the numbers provided

Common Functions

- LENGTH(string): Returns the length of the provided string
- INSTR(string, substring): Returns the position of the substring within the specified string.
- CAST(expression AS datatype): Converts an expression into the specified data type.
- ADDDATE(input_date, days): Adds a number of days to a specified date.
- NOW: Returns the current date, including time.
- CEILING(input_val): Returns the smallest integer greater than the provided number.
- FLOOR(input_val): Returns the largest integer less than the provided number.
- ROUND(input_val, [round_to]): Rounds a number to a specified number of decimal places.
- TRUNCATE(input_value, num_decimals): Truncates a number to a number of decimals.
 REPLACE(whole_string, string_to_replace, replacement_string):
- Replaces one string inside the whole string with another string.

 SUBSTRING(string, start_position): Returns part of a value,
 based on a position and length.

Create Table

```
Create Table
                CREATE TABLE tablename (
                  column_name data_type
Create Table with Constraints
  CREATE TABLE tablename (
    column_name data_type NOT NULL,
    CONSTRAINT pkname PRIMARY KEY (col),
    CONSTRAINT fkname FOREIGN KEY (col)
  REFERENCES other_table(col_in_other_table),
    CONSTRAINT ucname UNIQUE (col),
    CONSTRAINT ckname CHECK (conditions)
Create Temporary CREATE TEMPORARY TABLE
                tablename (
                  colname datatype
Drop Table
               DROP TABLE tablename;
```

Alter Table

Add Column ALTER TABLE tablename ADD columnname datatype;

Drop Column ALTER TABLE tablename
DROP COLUMN columnname;

Modify Column ALTER TABLE tablename CHANGE columnname newcolumnname newdatatype;

COLUMN currentname TO newname;

Add Constraint ALTER TABLE tablename ADD CONSTRAINT constraintname constrainttype (columns);

Drop Constraint ALTER TABLE tablename DROP constraint type constraintname:

Rename Table ALTER TABLE tablename RENAME TO newtablename:

Window/Analytic Functions

```
function_name ( arguments ) OVER (
[query_partition_clause]
[ORDER BY order_by_clause
[windowing_clause] ] )
```

Example using RANK, showing the student details and their rank according to the fees_paid, grouped by gender:

according to the rees_paid, grouped by gender:

SELECT

STUDENT TO THE SELECT

SELECT

SELECT

RANK() OVER (

PARTITION BY gender ORDER BY fees_paid

) AS rank_val

FROM student;

Subqueries
